

Additional instructions for Zoom 5800 VOIP Adapter

The IP address of the adapter is 192.168.0.4

The SIP settings are given by www.callwithus.com

<http://www.callwithus.com/configs/zoom-5801.png> can be of help for the settings

From <http://www.ebuyer.com/120381-zoom-5800-voip-phone-adapter-5800-72-11>

At under half the cost of a linksys PAP2 and with options to dial out on voip or landline it's a bargain if you could configure it.. well here's how

login to the web page of your ATA at [http://\[IP Address..\]](http://[IP Address..])

DONT use the "username" approach quoted in the "read me first" leaflet; instead use

username : administrator

password: metamorph

and hey presto all the menus are available and you can manually config ANY SIP VOIP provider you like :) and it will even support 4 different accounts!

Yes it does maybe open up too many options so that you'd need an IT Masters Degree [its ok i have got one, really! :)]

to understand.. so i'd suggest the best thing maybe is to just unlock the "Your Voip Account" (and maybe Voip Accounts 2-4 also if needed?)

clicking on them and changing the "User" dropdown (top right) from "-" (meaning hide from user account) to "P" which means full edit access with priority and you can override your providers downloaded updates if any (E is Edit with out Priority and V is View aka Read Only)

Probably want to change the default passwords also by the way..

n.b. If you want to use Skype, Zoom make a version specific for it - the 5900, this is a 5800 - pester ebuyer to stock it...

Hope this helps, thought it was a paperweight for the first hour or two till i found this info! I'll post again re performance if i can.
